Recordkeeping Course Specifications and Description

Course Specifications:

Course Number: 120.27

PEIMS Code: 12011600

Grade Placement: 9-10

Credits: ½ to 1

Prerequisites: None

Course Description:

Students implement personal and interpersonal skills to strengthen individual performance in the workplace and in society and to make a successful transition to the workforce and/or postsecondary education. Students analyze the social responsibility of business and industry impacting significant issues relating to the environment, ethics, health, safety, and diversity in society and the workplace. Students develop a foundation in economic, financial, technological, international, social, and ethical aspects of business to become competent consumers, employees, and entrepreneurs. Students enhance reading, writing, computing, communications, and reasoning skills, and apply them to the business environment.

Course Objectives:

- Use the numeric keypad by touch with accuracy.
- Perform basic and intermediate calculations using a spreadsheet.
- Format a spreadsheet.
- Verify data with accuracy.
- File data electronically.
- Organize tasks to work more efficiently.
- Perform recordkeeping tasks in a productive manner.
- Use software to analyze budgeting and investing.
- Demonstrate
 - Responsible use of credit.
 - Skill in keeping banking records.
 - Knowledge of banking services both nationally and internationally.
 - Skill in using specialized recordkeeping procedures
 - Skill in preparing and analyzing financial statements.
 - Skill in preparing payroll for a business.
 - Knowledge and understanding of the need and use of ethics in business.

Recordkeeping

Texas Essential Knowledge and Skills

120.27. Recordkeeping (One-Half to One Credit).

- (a) General requirements. This course is recommended for students in Grades 9-10.
- (b) Introduction. Students implement personal and interpersonal skills to strengthen individual performance in the workplace and in society and to make a successful transition to the workforce and/or postsecondary education. Students analyze the social responsibility of business and industry regarding the significant issues relating to the environment, ethics, health, safety, and diversity in society and in the workplace. Students develop a foundation in the economical, financial, technological, international, social, and ethical aspects of business to become competent consumers, employees, and entrepreneurs. Students enhance reading, writing, computing, communications, and reasoning skills and apply them to the business environment.
- (c) Knowledge and skills
 - (1) The student identifies the rights and responsibilities of consumer credit.
The student is expected to:
 - (A) develop a record keeping vocabulary;
 - (B) project the effect of poor credit on a consumer's credit worthiness by examining credit reports;
 - (C) list and explain the qualifications and procedures needed to obtain credit;
 - (D) research and present cases of consumer protection laws, for example, Texas Lemon Law and Deceptive Trade Practices Act;
 - (E) distinguish between regular and revolving credit accounts;
 - (F) identify problems involving personal use of credit cards;
 - (G) consider an annual percentage rate (APR) table and compute the APR on revolving charge accounts;
 - (H) compare costs of various forms of credit;
 - (I) determine the bank that offers the best credit card contract;
 - (J) interpret payment plans; and
 - (K) evaluate the effect of credit scoring on determining the availability of credit
 - (2) The student demonstrates an understanding of personal financial management.
The student is expected to:
 - (A) explain the importance of providing accurate information and calculations;
 - (B) calculate gross and net pay;
 - (C) plan and maintain a budget;
 - (D) simulate opening and maintaining various types of bank account;
 - (E) reconcile bank statements;
 - (F) compare the advantages and disadvantages of different types of banking services;
 - (G) examine investment growth by developing a personal investment plan;
 - (H) prepare an individual income tax return; and
 - (I) complete an order for merchandise for personal use.

- (3) The student applies mathematical processes to solve business problems.
The student is expected to:
- (A) apply the order of operations principle when solving business problems;
 - (B) calculate answers to problems using addition, subtraction, division, multiplication, percentages, and decimals;
 - (C) demonstrate ability to operate numeric key pad by touch;
 - (D) calculate conversions from the United States to the metric system of measurement;
 - (E) calculate currency conversion;
 - (F) calculate pay using time cards;
 - (G) prepare local, state, and federal tax reports;
 - (H) compare physical and perpetual inventories;
 - (I) prepare a customer's statement of account;
 - (J) verify invoices and statements;
 - (K) compute and verify extensions on purchase orders;
 - (L) calculate trade, chain, and quantity discounts;
 - (M) compute cash discounts and the amount due on purchase orders after adjustments for transportation charges, discounts, and returned merchandise;
 - (N) calculate payment dates;
 - (O) compute the percentage of bad debts to sales;
 - (P) compute the amount of credit card discounts;
 - (Q) maintain accounts receivable; and
 - (R) maintain accounts payable.
- (4) The student researches the components of productivity.
The student is expected to:
- (A) develop time management skills;
 - (B) enhance time management skills by using technology;
 - (C) evaluate the effects of errors versus accuracy on productivity; and
 - (D) evaluate the effects of employee absenteeism on business productivity
- (5) The student explains the concepts of integrity and confidentiality as related to the business environment.
The student is expected to:
- (A) define business ethics;
 - (B) define honest and dishonest business practices;
 - (C) analyze the effects of unethical practices on business;
 - (D) analyze the effects of unethical practices on consumers; and
 - (E) identify ethical considerations resulting from technological advances.

Recordkeeping TAKS Objectives Crosswalk with TEKS

Language Arts

Objective 1

The student will demonstrate a basic understanding of culturally diverse written texts.

- (6) **Reading/word identification/vocabulary development.** The student acquires an extensive vocabulary through reading and systematic word study.
The student is expected to
- (B) rely on context to determine meanings of words and phrases such as figurative language, connotation and denotation of words, analogies, [idioms,] and technical vocabulary;
 - (C) apply meanings of prefixes, roots, and suffixes in order to comprehend; and
 - (E) use reference material such as glossary, dictionary, [thesaurus, and available technology] to determine precise meanings and usage.
- (7) **Reading/comprehension.** The student comprehends selections using a variety of strategies.
The student is expected to
- (F) produce summaries of texts by identifying main ideas and their supporting details.
- (8) **Reading/variety of texts.** The student reads extensively and intensively for different purposes and in varied sources, including American literature.
The student is expected to
- (B) read in varied sources such as diaries, journals, textbooks, maps, newspapers, letters, speeches, memoranda, [electronic texts, and other media]; and
 - (C) read American and other world literature, including classic and contemporary works.

Objective 2

The student will demonstrate an understanding of the effects of literary elements and techniques in culturally diverse written texts.

- (10) **Reading/literary response.** The student expresses and supports responses to various types of texts.
The student is expected to
- (B) use elements of text to defend, clarify, and negotiate responses and interpretations.
- (11) **Reading/literary concepts.** The student analyzes literary elements for their contributions to meaning in literary texts.
The student is expected to
- (A) compare and contrast varying aspects of texts such as themes, conflicts, and allusions both within and across texts;
 - (B) analyze relevance of setting and time frame to text's meaning;
 - (C) describe and analyze the development of plot and identify conflicts and how they are addressed and resolved;
 - (D) analyze [the melodies of] literary language, including its use of evocative words and rhythms;
 - (E) connect literature to historical contexts, current events, [and his/her own experiences]; and
 - (F) understand literary forms and terms such as author, drama, biography, myth, tall tale, dialogue, tragedy and comedy, [structure in poetry, epic, ballad,] protagonist, antagonist, paradox, analogy, dialect, and comic relief as appropriate to the selections being read.

Objective 3

The student will demonstrate the ability to analyze and critically evaluate culturally diverse written texts and visual representations.

- (6) **Reading/word identification/vocabulary development.** The student acquires an extensive vocabulary through reading and systematic word study.
The student is expected to
 - (F) discriminate between connotative and denotative meanings and interpret the connotative power of words; and
 - (G) read and understand analogies.
- (7) **Reading/comprehension.** The student comprehends selections using a variety of strategies.
The student is expected to
 - (E) analyze text structures such as compare/contrast, cause/effect, and chronological ordering for how they influence understanding; and
 - (G) draw inferences such as conclusions, generalizations, and predictions and support them with text evidence [and experience].
- (8) **Reading/variety of texts.** The student reads extensively and intensively for different purposes in varied sources, including world literature.
The student is expected to
 - (D) interpret the possible influences of the historical context on a literary work.
- (10) **Reading/literary response.** The student expresses and supports responses to various types of texts.
The student is expected to
 - (B) use elements of text to defend, clarify, and negotiate responses and interpretations.
- (12) **Reading/analysis/evaluation.** The student reads critically to evaluate texts and the authority of sources.
The student is expected to
 - (A) analyze the characteristics of clearly written texts, including the patterns of organization, syntax, and word choice;
 - (B) evaluate the credibility of information sources, including how the writer's motivation may affect that credibility; and
 - (C) recognize logical, deceptive, and/or faulty modes of persuasion in texts.
- (19) **Viewing/representing/interpretation.** The student understands and interprets visual representations.
The student is expected to
 - (B) analyze relationships, ideas, [and cultures] as represented in various media; and
 - (C) distinguish the purposes of various media forms such as informative texts, entertaining texts, and advertisements.
- (20) **Viewing/representing/analysis.** The student analyzes and critiques the significance of visual representations.
The student is expected to
 - (B) deconstruct media to get the main idea of the message's content; and
 - (C) evaluate and critique the persuasive techniques of media messages such as glittering generalities, logical fallacies, and symbols.

Objective 4

The student will, within a given context, produce an effective composition for a specific purpose.

- (1) **Writing/purposes.** The student writes in a variety of forms, including business, personal, literary, and persuasive texts, for various audiences and purposes.
The student is expected to
 - (B) write in a voice and style appropriate to audience and purpose; and
 - (C) organize ideas in writing to ensure coherence, logical progression, and support for ideas.
- (2) **Writing/writing processes.** The student uses recursive writing processes when appropriate.
The student is expected to
 - (B) develop drafts [both alone and collaboratively] by organizing and reorganizing content and by refining style to suit occasion, audience, and purpose; and
 - (C) proofread writing for appropriateness of organization, content, style, and conventions.
- (5) **Writing/evaluation.** The student evaluates his/her own writing and the writings of others.
The student is expected to
 - (A) evaluate writing for both mechanics and content.

Objective 5

The student will produce a piece of writing that demonstrates a command of the conventions of spelling, capitalization, punctuation, grammar, usage, and sentence structure.

- (2) **Writing/writing processes.** The student uses recursive writing processes when appropriate.
The student is expected to
 - (C) proofread writing for appropriateness of organization, content, style, and conventions.
- (3) **Writing/grammar/usage/conventions/spelling.** The student relies increasingly on the conventions and mechanics of written English, including the rules of usage and grammar, to write clearly and effectively.
The student is expected to
 - (A) produce legible work that shows accurate spelling and correct use of the conventions of punctuation and capitalization [such as italics and ellipses];
 - (B) demonstrate control over grammatical elements such as subject-verb agreement, pronoun-antecedent agreement, verb forms, and parallelism; and
 - (C) compose increasingly more involved sentences that contain gerunds, participles, and infinitives in their various functions.
- (5) **Writing/evaluation.** The student evaluates his/her own writing and the writings of others.
The student is expected to
 - (A) evaluate writing for both mechanics and content.

Objective 6

The student will demonstrate the ability to revise and proofread to improve the clarity and effectiveness of a piece of writing.

- (2) **Writing/writing processes.** The student uses recursive writing processes when appropriate.
The student is expected to
 - (C) proofread writing for appropriateness of organization, content, style, and conventions.
- (3) **Writing/grammar/usage/conventions/spelling.** The student relies increasingly on the conventions and mechanics of written English, including the rules of usage and grammar, to write clearly and effectively.
The student is expected to
 - (A) produce legible work that shows accurate spelling and correct use of the conventions of punctuation and capitalization [such as italics and ellipses];
 - (B) demonstrate control over grammatical elements such as subject-verb agreement, pronoun-antecedent agreement, verb forms, and parallelism;
 - (C) compose increasingly more involved sentences that contain gerunds, participles, and infinitives in their various functions; and
 - (D) produce error-free writing in the final draft.
- (5) **Writing/evaluation.** The student **evaluates** his/her own writing and the writings of others.
The student is **expected** to
 - (A) evaluate writing for both mechanics and content.

Mathematics

Objective 1

The student will describe functional relationships in a variety of ways.

- A(b)(1) **Foundations for functions.** The student understands that a function represents a dependence of one quantity on another and can be described in a variety of ways.
- (A) The student describes independent and dependent quantities in functional relationships.
 - (B) The student [gathers and record data, or] uses data sets, to determine functional (systematic) relationships between quantities.
 - (C) The student describes functional relationships for given problem situations and writes equations or inequalities to answer questions arising from the situations.
 - (D) The student represents relationships among quantities using [concrete] models, tables, graphs, diagrams, verbal descriptions, equations, and inequalities.
 - (E) The student interprets and makes inferences from functional relationships.

Objective 2

The student will demonstrate an understanding of the properties and attributes of functions.

- A(b)(2) **Foundations for functions.** The student uses the properties and attributes of functions.
- (A) The student identifies [and sketches] the general forms of linear ($y = mx$) and quadratic ($y = ax^2$) parent functions.
 - (B) For a variety of situations, the student identifies the mathematical domains and ranges and determines reasonable domain and range values for given situations.
 - (C) The student interprets situations in terms of given graphs [or creates situations that fit given graphs].
 - (D) In solving problems, the student [collects and] organizes data, [makes and] interprets scatter plots, and models, predicts, and makes decisions and critical judgments.
- A(b)(3) **Foundations for functions.** The student understands how algebra can be used to express generalizations and recognizes and uses the power of symbols to represent situations.
- (A) The student uses symbols to represent unknowns and variables.
 - (B) Given situations, the student looks for patterns and represents generalizations algebraically.
- A(b)(4) **Foundations for functions.** The student understands the importance of the skills required to manipulate symbols in order to solve problems and uses the necessary algebraic skills required to simplify algebraic expressions and solve equations and inequalities in problem situations.
- (A) The student finds specific function values, simplifies polynomial expressions, transforms and solves equations, and factors as necessary in problem situations.
 - (B) The student uses the commutative, associative, and distributive properties to simplify algebraic expressions.

Objective 3

The student will demonstrate an understanding of linear functions.

- A(c)(1) **Linear functions.** The student understands that linear functions can be represented in different ways and translates among their various representations.
- (A) The student determines whether or not given situations can be presented by linear functions.
 - (C) The student translates among and uses algebraic, tabular, graphical, or verbal descriptions of linear functions.
- A(c)(2) **Linear Functions.** The student understands the meaning of the slope and intercepts of linear functions and interprets and describes the effects of changes in parameters of linear functions in real-world and mathematical situations.
- (A) The student develops the concepts of slope as a rate of change and determines slopes from graphs, tables, and algebraic expressions.
 - (B) The student interprets the meaning of slope and intercepts in situations using data, symbolic representations, or graphs.
 - (C) The student investigates, describes, and predicts the effects of changes in m and b on the graph of $y = mx + b$.
 - (D) The student graphs and writes equations of lines given characteristics such as two points, a point and a slope, or a slope and y -intercept.
 - (E) The student determines the intercepts of linear functions from graphs, tables, and algebraic representations.
 - (F) The student interprets and predicts the effects of changing slope and y -intercept in applied situations.
 - (G) The student relates direct variation to linear functions and solves problems involving proportional change.

Objective 4

The student will formulate and use linear equations and inequalities.

- A(c)(3) **Linear functions.** The student formulates equations and inequalities based on linear functions, uses a variety of methods to solve them, and analyzes the solutions in terms of the situation.
- (A) The student analyzes situations involving linear functions and formulates linear equations or inequalities to solve problems.
 - (B) The student investigates methods for solving linear equations and inequalities using [concrete] models, graphs, and the properties of equality, selects a method, and solves the equations and inequalities.
 - (C) For given contexts, the student interprets and determines the reasonableness of solutions to linear equations and inequalities.
- A(c)(4) **Linear functions.** The student formulates systems of linear equations from problem situations, uses a variety of methods to solve them, and analyzes the solutions in terms of the situation.
- (A) The student analyzes situations and formulates systems of linear equations to solve problems.
 - (B) The student solves systems of linear equations using [concrete] models, graphs, tables, and algebraic methods.
 - (C) For given contexts, the student interprets and determines the reasonableness of solutions to systems of linear equations.

Objective 5

The student will demonstrate an understanding of quadratic and other nonlinear functions.

- A(d)(1) **Quadratic and other nonlinear functions.** The student understands that the graphs of quadratic functions are affected by the parameters of the function and can interpret and describe the effects of changes in the parameters of quadratic functions.
- (B) The student investigates, describes, and predicts the effects of changes in a on the graph of $y = ax^2$.
 - (C) The student investigates, describes, and predicts the effects of changes in c on the graph of $y = x^2 + c$.
 - (D) For problem situations, the student analyzes graphs of quadratic functions and draws conclusions.
- A(d)(2) **Quadratic and other nonlinear functions.** The student understands there is more than one way to solve a quadratic equation and solves them using appropriate methods.
- (A) The student solves quadratic equations using [concrete] models, tables, graphs, and algebraic methods.
 - (B) The student relates the solutions of quadratic equations to the roots of their functions.
- A(d)(3) **Quadratic and other nonlinear functions.** The student understands there are **situations** modeled by functions that are neither linear nor quadratic and models the situations.
- (A) The student uses [patterns to generate] the laws of exponents and applies them in problem-solving situations.

Objective 6

The student will demonstrate an understanding of geometric relationships and spatial reasoning.

- G(b)(4) **Geometric structure.** The student uses a variety of representations to describe geometric relationships and solve problems.
- (A) The student selects an appropriate representation ([concrete,] pictorial, graphical, verbal, or symbolic) in order to solve problems.
- G(c)(1) **Geometric patterns.** The student identifies, analyzes, and describes patterns that emerge from two- and three-dimensional geometric figures.
- (A) The student uses numeric and geometric patterns to make generalizations about geometric properties, including properties of polygons, ratios in similar figures and solids, and angle relationships in polygons and circles.
 - (B) The student uses the properties of transformations and their compositions to make connections between mathematics and the real world in applications such as tessellations or fractals.
 - (C) The student identifies and applies patterns from right triangles to solve problems, including special right triangles (45-45-90 and 30-60-90) and triangles whose sides are Pythagorean triples.
- G(e)(3) **Congruence and the geometry of size.** The student applies the concept of congruence to justify properties of figures and solve problems.
- (A) The student uses congruence transformations to make conjectures and justify properties of geometric figures.

Objective 7

The student will demonstrate an understanding of two- and three-dimensional representations of geometric relationships and shapes.

- G(d)(1) **Dimensionality and the geometry of location.** The student analyzes the relationship between three-dimensional objects and related two-dimensional representations and uses these representations to solve problems.
 - (B) The student uses nets to represent [and construct] three-dimensional objects.
 - (C) The student uses top, front, side, and corner views of three-dimensional objects to create accurate and complete representations and solve problems.
- G(d)(2) **Dimensionality and the geometry of location.** The student understands that coordinate systems provide convenient and efficient ways of representing geometric figures and uses them accordingly.
 - (A) The student uses one- and two-dimensional coordinate systems to represent points, lines, line segments, and figures.
 - (B) The student uses slopes and equations of lines to investigate geometric relationships, including parallel lines, perpendicular lines, and [special segments of] triangles and other polygons.
 - (C) The student [develops and] uses formulas including distance and midpoint.
- G(e)(2) **Congruence and the geometry of size.** The student analyzes properties and describes relationships in geometric figures.
 - (D) The student analyzes the characteristics of three-dimensional figures and their component parts.

Objective 8

The student will demonstrate an understanding of the concepts and uses of measurement and similarity.

- G(e)(1) **Congruence and the geometry of size.** The student extends measurement concepts to find area, perimeter, and volume in problem situations.
 - (A) The student finds area of polygons and composite figures.
 - (B) The student finds areas of sectors and arc lengths of circles using proportional reasoning.
 - (C) The student [develops, extends and] uses the Pythagorean Theorem.
 - (D) The student finds surface area and volumes of prisms, pyramids, spheres, cones, and cylinders in problem situations.
- G(f)(1) **Similarity and the geometry of shape.** The student applies the concepts of similarity to justify properties of figures and solve problems.
 - (A) The student uses similarity properties and transformations to [explore and] justify conjectures about geometric figures.
 - (B) The student uses ratios to solve problems involving similar figures.
 - (C) In a variety of ways, the student [develops,] applies, and justifies triangle similarity relationships, such as right triangle ratios, [trigonometric ratios,] and Pythagorean triples.
 - (D) The student describes the effect on perimeter, area, and volume when length, width, or height of a three-dimensional solid is changed and applies this idea in solving problems.

Objective 9

The student will demonstrate an understanding of percents, proportional relationships, probability, and statistics in application problems.

- (8.3) Patterns, relationships, and algebraic thinking. The student identifies proportional relationships in problem situations and solves problems.
The student is expected to
(B) estimate and find solutions to application problems involving percents and proportional relationships such as similarity and rates.
- (8.11) **Probability and statistics.** The student applies the concepts of theoretical and experimental probability to make predictions.
The student is expected to
(A) find the probabilities of compound events (dependent and independent); and
(B) use theoretical probabilities and experimental results to make predictions and decisions.
- (8.12) **Probability and statistics.** The student uses statistical procedures to describe data.
The student is expected to
(A) select the appropriate measure of central tendency to describe a set of data for a particular purpose; and
(C) construct circle graphs, bar graphs, and histograms, with and without technology.
- (8.13) **Probability and statistics.** The student evaluates predictions and conclusions based on statistical data.
The student is expected to
(B) recognize misuses of graphical or numerical information and evaluate predictions and conclusions based on data analysis.

Objective 10

The student will demonstrate an understanding of the mathematical processes and tools used in problem solving.

- (8.14) **Underlying processes and mathematical tools.** The student applies Grade 8 mathematics to solve problems connected to everyday experiences, investigations in other disciplines, and activities in and outside of school.
The student is expected to
(A) identify and apply mathematics to everyday experiences, to activities in and outside of school, with other disciplines, and with other mathematical topics;
(B) use a problem-solving model that incorporates understanding the problem, making a plan, carrying out the plan, and evaluating the solution for reasonableness; and
(C) select or develop an appropriate problem-solving strategy from a variety of different types, including drawing a picture, looking for a pattern, systematic guessing and checking, acting it out, making a table, working a simpler problem, or working backwards to solve a problem.
- (8.15) **Underlying processes and mathematical tools.** The student communicates about Grade 8 mathematics through informal and mathematical language, representations, and models.
The student is expected to
(A) communicate mathematical ideas using language, efficient tools, appropriate units, and graphical, numerical, physical, or algebraic mathematical models.
- (8.16) **Underlying processes and mathematical tools.** The student uses logical reasoning to make conjectures and verify conclusions.
The student is expected to
(A) make conjectures from patterns or sets of examples and non-examples; and
(B) validate his/her conclusions using mathematical properties and relationships.

Unit 1 Business Skills

Behavioral Objectives:

- Use the numeric keypad by touch and with accuracy.
- Perform basic and intermediate calculations using a spreadsheet.
- Format a spreadsheet.
- Verify data with accuracy.
- File data electronically.
- Perform recordkeeping tasks in a productive manner.
- Understand the concept of business ethics.

TEKS:

2A, 3A, 3B, 3C, 3L, 3M, 3N, 3O, 3P, 4A, 4B, 4C, 4D, 5A

TAKS:

- LA1, LA4, LA5, LA6
- M10

Unit Overview:

Students begin by exploring and learning some basic skills that assist them in completing the coursework with more success. They

- **Learn the numeric keypad by touch.** Students use this throughout the course just as they use the spreadsheet for a calculator on their manually completed paperwork, and use Quicken and spreadsheets to solve recordkeeping problems.
- **Learn some basic spreadsheet formulas, functions, and formatting.** This lesson does not target complete mastery of the spreadsheet, but it should give your students enough knowledge to use the spreadsheet on some basic tasks and build their skill in the use of spreadsheets from there.
- **Practice verifying data.** This makes your students aware of the importance of data being accurate. In business, small errors can cause waste of time and money. Sometimes a small error can be a very expensive mistake.
- **Get organized to work more efficiently.** This includes both electronic organization and manual organization. There is a short lesson on creating folders and naming files so students can electronically file all their work efficiently. Your students then organize a notebook filing system for their work that they complete manually or with hard copy printouts. As their work progresses, students might need to reorganize by adding dividers or adding folders.
- **Keep a progress record.** This is to make them aware of their productivity level. Being productive in the business world and knowing how you use your time is an important skill.

Materials Checklist for Duration of Course:

- Textbook: Schultheis, Robert A, Kaliski, Burton S. and Passalacqua, Dan. (2001). Keeping Financial Records for Business. Southwestern Educational Publishing, Cincinnati, OH.
- Printer
- Spreadsheet software
- Presentation software
- Word processing software
- Internet access

Materials Checklist for Unit:

- Typing software
- Keyboarding textbook or supplemental textbook with drills using numeric keypad or 10-key
- Spreadsheet textbook with activities for basic spreadsheet skills
- Newspaper or Internet article
- 3-ring binder (2 inch)
- Dividers with pockets
- Calendar
- Email software

Facilitation Tips

Students complete this unit with very little guidance. You might want have them use their own personal preferences in organizing their notebook dividers as well as any preferences in naming of files or organization of files. Students need some explanation of where to store the files, i.e. hard disk, network, or disk.

Decide whether to grade from a hard copy printout or the electronic version and the give your students instructions on how much to print.

Check technique in using the numeric keypad in the beginning and occasionally throughout the course.

Depending on time allotted, you might want your students to complete a supplemental textbook on using spreadsheets for more spreadsheet practice.

Use a supplemental textbook and/or software for learning the numeric keypad.

Unit Overview:

Students learn to use technology tools to manage their money. Quicken Premier for Home and Business is used to teach them these skills. This unit particularly useful as they move into the adult world of credit cards, bills, and online banking.

Facilitation Tips

You can find an educational discount for Intuit products by contacting an educational sales representative.

It might be necessary to provide some direct facilitation when students first begin setting up their Quicken accounts.

The investment component is particularly effective if they can track their stocks for a period of time using the online Quicken components.

Encourage students to add financial information other than that directly assigned so they can personalize their accounts. They might even want to open a Quicken file of their own using the skills they develop here.

Unit 3 Credit Responsibility

Behavioral Objectives:

- Complete an application for credit.
- Verify credit card statements.
- Analyze the best credit card use.
- Make good decisions where credit is concerned.
- Demonstrate knowledge about basic protection guidelines against risk and financial loss.

TEKS:

1B, 1C, 1E, 1F, 1I, 1J, 1K; 3H, 3J, 4A, 4B, 5D

TAKS:

- LA1, LA3, LA4, LA5, LA6
- M10

Unit Overview:

Your students begin by learning the basics of credit, including completing a credit card application. Focus is on responsible use of credit. This includes verifying credit card statements and following proper procedures in reporting errors in statements. Students learn how to analyze and make decisions about proper credit card use and following basic protection guidelines to manage risk and financial loss.

Facilitation Tips

Lesson 1

Provide your students with a manual credit application to complete.

Lesson 2

You can orally assess your students' knowledge of the parts of the credit card statement by having them give an oral explanation of a credit card statement. You can use the visuals of credit card statements on the Web sites provided in resources.

Lesson 3

You might need to explain some of the formulas used on the spreadsheets for calculating annual and monthly finance charges.

Lesson 4

Assist your students in using their completed projects by finding them a classroom in which to present their information to or a place to display their flyer. If the Web sites suggested are not available, you might need to assist your students in performing a search for other sites to use as their readings to support their projects.

TAKS:

- LA 1, LA 4, LA 5, LA 6
- M10

Unit Overview:

Students research and problem solve. The unit covers a multitude of specialized procedures used in recordkeeping, including cashiering skills, calculating skills and accurate recording of sales and purchases. Your students research topics from soft skills to codes of ethics. By the end of this unit, your students should have a good grasp of what is required in both the purchasing and sales cycle of recordkeeping, as well as the differences in accounts payable and receivable. Your students learn many formulas including computation of sales tax, discounts, and invoices.

Facilitation Tips

Students complete vocabulary and research assignments on their own without much facilitation. Encourage them to be specific in their writing and produce research documents with substance. The unit requires a number of business math skills. If desired, you might want your students to complete more problems than are provided. There are many workbooks available that easily cover mastery of computation skills for discounts, sales tax, inventory records, and account balances. Another supplement to this unit can be more computation problems using a spreadsheet. Students might need a demonstration of the formulas for performing the calculations in this unit.
